WHO IS HIGH POINT GAS GATHERING, HIGH POINT GAS TRANSMISSION, AND DRY TRAILS MIDSTREAM ENERGY?

We are business units of High Point Energy, LLC that operates about 700 miles of high pressure intrastate natural gas and 44 miles of NGL interstate transportation pipelines both onshore and offshore in the United States (see map) along with related storage, compression and metering facilities.

Our pipelines cross different areas of North America for long distances, transporting natural gas and natural gas liquids to distribution points and processing plants.

High Point Energy works hard to maintain the integrity of our pipeline systems and keep them safe from security threats. We stay in contact with industry and government agencies to monitor potential threats and study new technologies that will help keep our facilities as safe and secure as possible.

Though we electronically monitor our assets and regularly patrol them by both air and ground, we also request your help to maintain a safe, secure, and reliable pipeline system.

If you observe any unusual or suspicious activity near our pipeline facilities or in the unlikely event an emergency occurs, please call us at any time using one of the numbers listed in this document. More information on High Point Energy can be found at: www.highpointenergy.net

WHAT ARE THE SIGNS OF A NATURAL GAS PIPELINE LEAK?

- Blowing or hissing sound
- Dust blowing from a hole in the ground
- Continuous bubbling in wet or flooded areas
- Gaseous or hydrocarbon odor
- Dead or discolored vegetation in a green area
- Flames, if a leak has ignited

WHAT SHOULD I DO IF I SUSPECT A PIPELINE LEAK?

Your personal safety should be your first concern:

- Evacuate the area and prevent anyone from entering
- Abandon any equipment being used near the area
- Avoid any open flames

- Avoid introducing any sources of ignition to the area (such as cell phones, pagers, 2-way radios)
- Do not start/turn off motor vehicles/ electrical equipment
- Call 911 or contact local fire or law enforcement
- Notify the pipeline company
- Do not attempt to extinguish a natural gas fire
- Do not attempt to operate any pipeline valves

Pipeline system failures occur infrequently along our nation's pipeline network and facilities, and many of these are caused by damage from others digging near the pipeline. We watch for unauthorized digging, but we need your help as well.

We participate in One-Call Centers and strongly encourage those who are going to dig to call their state One-Call Center or the 811 "Call before you dig" hotline (see below) to allow pipeline companies and owners of other buried utilities a chance to mark the underground facilities in the area before digging begins.

Pipeline Location and Markers Pipeline markers (see below) like these are used to indicate the approximate location of a natural gas pipeline and to provide contact information. Aerial patrol planes also use the markers to identify the pipeline route. Markers should never be removed or relocated by anyone other than a pipeline operator.

To find out where High Point Energy pipelines are located in your area, visit our website at www.highpointenergy.net – OR – contact a High Point Energy representative at the number listed above.

You can also find out where other companies' pipelines are in your area by going to the National Pipeline Mapping System website at www.npms.phmsa.dot.gov.
